

ActualMeds Debuts With The Hive as Part of TEDMED 2013

Health Information Technology Firm will introduce solutions for medication management of chronically ill patients at the point of care

EAST HARTFORD, CT , April 16, 2013 / / -- ActualMeds, a technology company providing solutions for team-based medication management at the patient point of care, is one of the 50 of over 250 applicants who will debut with "The Hive" -the newest platform of TEDMED 2013 at the Kennedy Center for the Performing Arts Washington, DC, April 16-19, 2013. The Hive will bring together the leaders of today with the future leaders of tomorrow in a showcase of new approaches to innovation and scalable new ideas.

The Hive at TEDMED 2013 is also a debut for ActualMeds, formerly known as AdhereTx Corporation, who will feature its newest solutions to enable health care teams to conduct cost-effective medication reconciliation for high-risk patients along the care continuum. "We are delighted and honored to be chosen among this notable group of thought leaders and innovators" says Patricia Meisner, Chief Executive Officer and a co-founder at ActualMeds. " There has never been more environmental pressure than today for transformation in healthcare. With thought leaders and innovators immersed in discussion of healthcare's challenges, the Hive will be catalytic to change and identification of opportunities to improve the quality of healthcare. ActualMeds will be part of that transformation."

ActualMeds enables health care practitioners to access a patient's medication history when and where it is needed- from a primary care visit, to the emergency department, to home care. Using standards-based interoperability, the solution incorporates "*what the doctor ordered*" from the patient's electronic health record, "*what prescriptions got filled*" from insurance claims data, and presents this validated information alongside of a structured interview to elicit "*what the patient is actually doing*". Evidence-based rules facilitate interpretation of risk associated with the medication regimen and guide intervention at the point of care. Health care providers save time and can take action when it can be most effective to improve patient outcomes. The technology was originally developed and validated in an NIH sponsored randomized, controlled trial in the School of Nursing at the University of Connecticut, where the intervention demonstrated it could improve patient outcomes and lower health care costs.

About ActualMeds ActualMeds is a health care information technology company focused on providing web-based and mobile solutions to enable team-based medication management and reconciliation at the point of care. Headquartered in East Hartford, CT, the company also has an office in New York City, where it is working with several major medical centers, as part of the New York Digital Health Accelerator

(<http://digitalhealthaccelerator.com>)

to demonstrate that the ability to conduct automated medication reconciliation in a variety of settings along the care continuum can prevent hospitalizations and reduce re-admissions for chronically ill patients. For more information, visit
